Senior Azure Cloud Engineer (m/f/d) - 40% till 60% remote work possible

Job-ID: CF-00003983
Ort: München

Main Tasks:

The team "IT Tools and Infrastructure" supports numerous applications including those used to support internal processes, to provide reporting services around the central data warehouse. In a rapidly changing world this role provides the opportunity to constantly learn new skills and technologies as well as develop knowledge of ITIL processes, security and IT migration projects. As part of a dynamic team, your key responsibilities will be to support the setup and deployment of applications primarily based on Linux, Kubernetes and several other Cloud Technologies. You will be responsible for the ongoing 3rd level management as well assupporting the 1st and 2nd level Operations teams. You will manage and roll out changes and security patches ensuring standard processes are followed.

- Manages the configuration, maintenance, enhancement and support of commercial software packages, internally developed applications and web services; in particular Data storage, Datalake, Databricks, Kubernetes, ACR, NSG and Azure Defender
- Manages the customization and addition of new features to commercial software packages and internally developed applications according to business requirements
- Supports in 3rd level operational issues of the various applications
- Provides technical support to 1st and 2nd level operations teams as well as training, transition to production and all related documentation
- Governance of cloud configuration via Terraform, upgrades and security patching
- Working within a change and release driven structure, mainly in project teams, to ensure deadlines are met and communication of current status is provided regularly and concisely

Your technical qualifications:

- University degree in (business) information technology, mathematics, economics with IT focus or comparable degree
- Profound professional experience with Azure products and platforms
- Good knowledge of Cloud architecture concepts & principles with experience in Change and/or 3rd level technical teams
- Understanding of IT security concepts, hardening and best practice approaches
- Good understanding of ITIL processes especially in regard to change and release management Experience in Tomcat application server is a plus
- English and German fluent

Your personal qualifications:

- Excellent customer orientation as well as communication skills towards team members, clients and internal customers
- Ability to clearly communicate complex topics to both technical and not technical people as well as explaining abstract concepts

Our client offers:
Exciting challenges in a demanding and international project- and customer environment. A modern work environment in one of the most attractive cities in Europe. An attractive salary package and good social benefits form the framework for this interesting position.
