For his location in Munich, our customer is currently looking for a qualified:

Senior Linux Application Engineer (m/f/d) - 40% till 60% remote work possible

Job-ID: CF-00003984
Job-Ort: München

Main Tasks:

The team "IT Tools and Infrastructure" supports numerous applications including those used to support internal processes and to provide reporting services around the central data warehouse. In a rapidly changing world this role provides the opportunity to constantly learn new skills and technologies as well as develop knowledge of ITIL processes, security and IT migration projects. As part of a dynamic team, your key responsibilities will be to support the setup and deployment of applications primarily based on Linux and Cloud platforms. You will be responsible for the ongoing 3rd level management as well as supporting the 1st and 2nd level Operations teams. You will manage and roll out changes and security patches ensuring standard processes are followed.

- Manages the configuration, maintenance, enhancement and support of commercial software packages, internally developed applications and web services; in particular Oracle Products such as Oracle Internet Directory, Oracle Access Manager, Oracle WebLogic Server, BPM as well as IBM Cognos, Nagios and Tomcat Application Server
- Manages the customization and addition of new features to commercial software packages and internally developed applications according to business requirements
- Supports in 3rd level operational issues of the various applications
- Provides technical support to 1st and 2nd level operations teams as well as training, transition to production and all related documentation
- Performs software upgrades and security patching
- Working within a change and release driven structure, mainly in project teams, to ensure deadlines are met and communication of current status is provided regularly and concisely

Your technical qualifications:

- University degree in (business) information technology, mathematics, economics with IT focus or comparable degree
- Profound professional experience with non-database Oracle products, experience in other applications as above mentioned are an advantage
- Good knowledge of Linux and application management concepts and principles with experience in Change and / or 3rd level technical teams
- Good knowledge of Kubernetes and Docker
- Experience with Azure as a Cloud platform is an advantage
- Understanding of IT security concepts, hardening and best practice approaches
- Good understanding of ITIL processes especially in regard to change and release management
- Experience in Terraform programming is a plus
- English and German fluent

Your personal qualifications:

- Excellent customer orientation as well as communication skills towards team members, clients and internal customers
- Ability to clearly communicate complex topics to both technical and not technical people as well as explaining abstract concepts

Our client offers:

- Exciting challenges in a demanding, international project and customer environment
- A modern working environment that meets the highest standards in one of the most attractive cities in Europe
- An attractive salary package and good social benefits
- A wide range of training and development opportunities
