Our client is a dynamic and innovative software company for CAD/CAM software in the field of medical technology. For the location in Darmstadt our client is looking for a qualified:

Senior Data Engineer (m/f/d) – 40% - 60% remote possible

Job-ID: CF-00004262
Job-Ort: Darmstadt

Your main tasks:

- Design, implement and maintain efficient and reliable data pipelines to get data across multiple systems (on-premise and cloud based sources)
- Collaborate with multiple teams (database administrators, software engineers, machine learning researchers)
- Design and develop custom tools to facilitate effective data consumption
- Implement a data workflow to aggregate and structure data for high-performance analytics
- Monitor performance of the data platform and optimize as needed
- Evaluate, benchmark and integrate latest big data tools and technologies

Your technical qualifications:

- Bachelor's degree or equivalent combination of education/experience in Computer Science, Information Systems, or related field
- Minimum of 5 years of experience in Data Engineering
- Minimum of 2 years of software development experience
- More than 2 years of experience with Python
- Extensive experience with SQL
- Experience with network programming and relational databases
- Excellent written and verbal communication skills in English

Your personal qualifications:

- A sense of responsibility
- Self-reliant way of working

Our client offers:

Exciting and varied activities in a dynamic and growth-oriented software company. You can expect flat structures and efficient decision-making processes. You can look forward to a positive working atmosphere that promotes both individual freedom and responsibility. Furthermore, you can expect a strong team spirit and a very good working atmosphere as well as modern offices and workplaces. Flexible working hours and home office options are a matter of course.
